

SYSTEM AND METHOD FOR MANAGING FULFILLMENT DATA  
ASSOCIATED WITH A FULFILLMENT SYSTEM

5

ABSTRACT OF THE DISCLOSURE

A method of managing fulfillment data associated with a fulfillment system is provided. The method includes establishing a plurality of fulfillment interfaces for a plurality of fulfillment types by locally generating a single local parent multi-definition table appropriate for the plurality of fulfillment types, and for each fulfillment type: generating a name and definition for a local parent view of the single local parent multi-definition table; mapping the definition for the local parent view to the single local parent multi-definition table to generate the local parent view; and using the name and mapped definition for the local parent view to remotely generate a remote actual child view of a remote actual child multi-definition table and a remote staged child view of a remote staged child multi-definition table, each remote child view comprising a copy of the local parent view.
